

- A. Conductive waste bins are useful in large ESD Protected Areas where waste accumulates and cannot be conveniently removed except in bulk.
- B. Desco Europe conductive waste bins are made of conductive fibreboard formed around steel hoops shaped to a square at the top the bin.
- C. The bins are sturdy yet light enough to be easily handled.
- D. Cut-outs on two opposite sides serve as handles.
- E. A yellow paper label (non-conductive) is adhered to each of the other two sides to designate the use of the bin.

"ESD damage can occur when:

- a charged person or object comes into contact with an ESD sensitive device (ESDS);
- an ESDS comes into direct contact with a highly conductive surface while exposed to an electrostatic field;
- a charged ESDS comes into contact with another conductive surface which is at a different electrical potential. This surface may or may not be grounded."

[IEC 61340-5-1 Introduction]

"All non-essential insulators and items (plastics and paper), such as coffee cups, food wrappers and personal items shall be removed from the workstation or any operation where unprotected ESDS are handled." [EN 61340-5-1 Clause 5.3.4.2 Insulators]
