Description

The Desco Europe ESD Survey Kit is used for measuring, verifying, and qualifing products for use in the ESD Protected Area. The kit includes the following instruments:

- **Digital Surface Resistance Meter** to measure resistance point-to-point (Rp-p) or surface to ground (Rg) in accordance with IEC 61340-2-3. Use for testing working surfaces, storage racks, trolleys, flooring, garments and seating.
- Handheld Electrode to measure Floor Materials and Footwear - Resistance Measurement in Combination with a Person (IEC 61340-4-5).
- AC Outlet Analyser to confirm that an electrical outlet's wiring is correct and the path-to-earth protective ground is intact.
- Low Resistance Tester to measure the resistance of grounding paths of banana jacks and other equipment.
- Ionisation Test Kit to measure static fields and to measure offset voltage (balance) and charge decay of ionisation equipment.
- Training Paddle Set to demonstrate the creation of static charges and the functionality of ESD control products.
- Adjustable Metal Wrist Strap to ground the operator.
- **Heel Grounders** to ground the operator via ESD flooring.

The ESD Survey Kit is available in two models:

ltem	Region
<u>222697</u>	United Kingdom
<u>222698</u>	Europe

DESCO EUROPE - 2A DUNHAMS LANE, LETCHWORTH, HERTFORDSHIRE, SG6 1BE, UK Phone: +44 (0) 1462 672005 • E-mail: <u>Service@DescoEurope.com</u>, Website: <u>DescoEurope.com</u>

Per IEC 61340-5-1 clause 5.2.4 Compliance verification plan: "A compliance verification plan shall be established to ensure the organization's fulfillment of the requirements of the plan. Process monitoring (measurements) shall be conducted in accordance with a compliance verification plan that identifies the technical requirements to be verified, the measurement limits and the frequency at which those verifications must occur. The compliance verification plan must document the test methods used for process monitoring and measurements. If the organization uses test methods that differ from the standards referenced in this standard, the organization must be able to show that the results achieved correlate with the referenced standards. Compliance verification records shall be established and maintained to provide evidence of conformity to the technical requirements. The test equipment selected shall be capable of making the measurements defined in the compliance verification plan."

This clearly states the necessity of having the means to perform regular self audits or compliance verification testing at your facility. This may completed using the ESD Survey Kit.

The ESD Standard IEC 61340-5-1 can be purchased from <u>www.bsigroup.com</u>.
